

*This acceleration system, consist of one or two mechanical small levers placed under the steering wheel, it can be used in cars with an automatic transmission or automatic clutch.*

*To accelerate, just press down one or both levers. It is a low cost option to the electronic version and can be easily transferred to another car. The mechanical transmission allows you to control acceleration in a smooth, precise and safe way. The car stays original, because the two small levers are placed behind the steering wheel. The original accelerator pedal stays always active. This hand-control is CE marked.*

# MECHANICAL MANETTES «MV908M»

*The Manettes are available in two versions: electronic and mechanical, always specific to the car model.*

**This acceleration system, consisting of one or two small levers placed under the steering wheel, can be used in cars with an automatic transmission or automatic clutch.**

**To accelerate, simply press down one or both levers. The acceleration returns automatically at idle when the brake is applied. This hand-control keeps all the original adjustments of the steering wheel and all the controls and the options (airbag, adjustment in height and length, controls on the wheel and so on).**

**A benefit of this product is the opportunity to reduce the power**

# ELECTRONIC MANETTES «MV908»

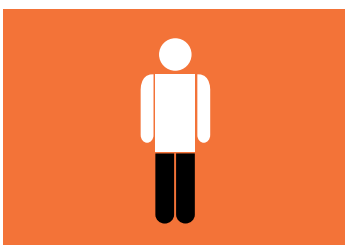

**The Manettes are available in two versions: electronic and mechanical.**
