

RE205 ELECTRICAL TIP UP PLATE

The electrical tip-up plate has been designed to make the car entrance and the car exit easier. It is particularly suitable for those cars like Minivan where the vehicle seat is higher than usual. The tip-up plate can be fitted both on the driver side and the passenger side and no change of the original seat is necessary. The tip-up plate is driven by a push-button handset. Depending on the car model and on the distance between the seat and the wheelchair, the plate can be chosen among different sizes.

The tip-up plate is easily removable. A security system automatically stops the tip-up plate stroke in case of need. Maximum load is 100 Kiloes.
