

LEFT FOOT GAS PEDAL

Left foot accelerators can be fitted in cars with automatic transmission, to the left of the brake pedal, allowing to accelerate with the left foot

DS-SE10EL is a foot accelerator, similar to the original one, that is placed to the left of the brake pedal. It can fit on all vehicles with an electronic foot accelerator. For security reasons, at each engine start it's the original accelerator pedal to come into operation, but the driver can choose to use the left foot accelerator, instead, by pushing a LED switch placed on the dashboard. Once the desired pedal has been selected, it will be no longer possible to modify your choice unless you stop and start the engine again. If not used, DS-SE10EL can be easily removed.

DS-SE10EL

DS-SA196-02 FLIP-UP

DS-SA196-02 flip-up is a mechanical left foot accelerator fastened to the brake power-assistance bolts. Thanks to the innovative flip-up system, the left foot accelerator and its pedal guard can be easily rotated upwards allowing body-abled people to drive the vehicle.

DS-SA197-03

DS-SA197-03 is a mechanical device to be fastened to the car floor and to be easily and quickly fitted and removed. The original pedals rendered unapproachable by means of a pedal guard avoiding any unintentional acceleration with the right foot.
