

# MANUAL BRAKE LEVERS

ELECTROMAGNETIC  
COMPATIBILITY  
TESTED

These devices allow people with partial or complete lack of functionality to lower limbs to drive. Brake levers transfer the brake control from the pedal to the wheel, by making it manual. Both levers are directly connected to the foot brake pedal.

## LF 901

LF901 enables to brake with a very short motion downwards; being aligned with the pedal, all the power given to the lever comes multiplied on it. LF901 is developed and projected specifically for the car model in that it will be installed, whereby the transmission rods of LF901 remain totally hidden inside the dashboard permitting an easy access to knees and keeping the design inside the car unchanged.

## LF12

LF12 enables to brake by pushing the brake lever forward, to the dashboard. It is a standard device and it can be installed on the right and on the left of the steering wheel.
