

K-LIFT 140

K-LIFT 140 is a new hoist, made by Kivi, with a jointed arm which makes it easier to load the wheelchair inside the car. Made of a solid and strong material, K-LIFT 140 can lift any wheelchair, either electric or manual, up to 140 kilos and fits most of the cars on the market, even the smallest ones. K-LIFT 140 is placed in the luggage compartment or fitted to the B-pillar, close to the rear side door; in both cases, it can be placed on the right or on the left, according to customer needs. When not in use, its arm can be easily removed, as to avoid being in the way. Inner and outer rotation of this jointed arm is manual, while raising and lowering the wheelchair is powered by either a wired push-button handset or a remote control, on request. When the push-button handset is properly stored in the supplied case, an internal safety system disables the operation of the hoist avoiding its inadvertent activation; by holding the push-button handset again its operation will be restored.
